

PILIKULA BIOLOGICAL PARK

International Day of Biological Diversity-2022

'Building a shared future for all life'

Globally, around 25% of all animal and plant species are threatened with extinction. The International Day for Biological Diversity is targeted towards raising awareness and building momentum on the importance of biodiversity as well as global issues on biodiversity loss, in the lead up to the United Nations Biodiversity Conference. Understanding the importance of biodiversity to our daily life, the whole functioning of our community, region and country and the benefits for the entire world is a key part of celebrating biodiversity.

The International Day for Biological Diversity aims to raise awareness and understanding of biological diversity and issues surrounding it. The day also serves to highlight possible strategies to protect biodiversity, which refers to the variety of life on the planet. Today, habitats are degrading and leading to a reduction in biodiversity, a problem that directly affects human well-being, poverty reduction and global sustainable development.

The theme of the International Day for Biological Diversity (IDB) on 22 May 2022 is " Building a shared future for all life "

In the eve of IDB- 2022 celebration, Pilikula Biological Park is organizing DRAWING, ESSAY WRITING and SLOGAN WRITING competitions for students.
